I would like to know whether there is any other way rather than Overloading Data for adding additional datatypes. A: Type extension is a way to add new attributes to base types. What you want is different. You need to define your own data type and use it. Something like this:

```
public struct MyDataType { public int SomeProperty { get; set; } public int SomeOtherProperty { get; set; } } public MyType Foo() { var x = new MyDataType(); x.SomeProperty = 10; x.SomeOtherProperty = 12; return x; }
```

 The challenges to and opportunities for primary health care planning in the postreform world: Colombia's Medi-Salud. This paper examines challenges and opportunities for primary health care planning in the context of major health care reform in Colombia, following the 1990s structural reforms. The paper argues that implementation of the reforms has not been coherent or coherent in the expected directions. The paper suggests that the challenges to strengthening primary health care must be met before making progress on primary health care reform, and that problems of implementation
