Access to local staff with research skills may be limited, and some staff may have.n but have limited research and scientific experience (Zerem, 2013). Use of equipment [use of equipment for research purposes]. The researcher can use any equipment he wants to conduct these studies. Robots and machines can be used as specific devices for research purposes. Research robots can be self-learning, and when robots and machines learn, their performance can be improved as robots and systems work more efficiently and are able to interact with humans. Use of individual sensors [use individual sensors for research]. Direct use of sensor biomonitoring [individual sensors] can be difficult due to human factors. Other agents can read information from sensors, but they are usually limited in time and usually cannot interact with many sensors. However, conventional sensors may have a more limited lifespan and may be tightly coupled to each other, or they may be replaced anywhere in the room. Research Transport [Use research transport for research]. As it walks down the street, the robot can capture the temperature and other environmental conditions it interacts with, such

as walking above the floor, underground, or in the air. These conditions may be useful for more complex studies. For example, as soon as the robot moves from one place to another, based on the received data, a decision can be made on what needs to be explored. Transport can also be used to transport sensors to the laboratory. Explore without particles [explore without particles]. Doing research where particles can break into atoms or molecules and then reassemble the whole, but in order to explore this, it is necessary to collect the particles separately. In this case, the study can be carried out without the use of a robot. However, in order to collect the particles, it may be necessary to implant the nanoparticles into the sensor from which they are collected. Robotic Arm [Use the robotic arm to explore]. When scientific experiments require human input, a scientist can use a robot to allow the machine to explore the environment at a given position. Keeping a diary [make a diary]. Keeping personal diaries can be very important when conducting research, especially when the researcher has a very limited time frame. Data analysis [data analysis]. When processing the data, various approaches can be used to arrive at the ideal solution. Some may use statistical processing methods to analyze the data with acceptable estimates. Others
