Reason 7 software lets you creatively manage your audio recordings. Record your instruments and let the software cut your recording automatically. Create your own themes, apply effects, masks, rip all together or combine these three modes to create your own mixes. And insert into the tracks, "dynamics", stereo effects or additional instruments. d Once enough recordings have been created, you can start playing them. It's a lot easier to create songs than you think and then listen to your new and unique mix. f When you benefit from a sound card, use Reason to learn or expand. The vocal parts passed through it allow you to change your voice and get a more powerful sound. You can also "scan" your instruments by getting audio tracks from them, which is not usually available with other recording programs. Use this function with instruments such as flute, guitar, bow, and others. g The program supports various playback controls, allowing you to adjust the volume, tempo, frequency, and key. You can add an audio track, overdub "dynamite", shape and save as AAC, M3U or WAV. To make sure all sections match the original, add your own track. And if you want to record vocals, you can use authoring and overlay effects. g You can easily stream an audio file or use a tag editor. You can easily process them by creating effects such as filters, distortion algorithm, audio overlays and effect overlays. "Split-screen" will help you quickly create playlists and save them. 7.
