The behavior of voltage-gated sodium currents during early development and in culture: NaV1.4 as a model. At different times during development, whole-cell and patch clamp methods were used to determine the voltage-dependent properties of sodium currents in oocytes injected with messenger RNA prepared from mouse brain. A primary difference between sodium currents in freshly extracted oocytes and those after injection of mRNA was a decrease in peak current density with increasing membrane potential. Injected oocytes expressed sodium currents by approximately the sixth day after injection. An expression system for mRNA injection into *Xenopus* oocytes was used to study sodium channels from the sodium channel family alpha subunits NaV1.1 and NaV1.2. The kinetics of

these channels were compared with those of the other subunits NaV1.3, NaV1.4, NaV1.6, and NaV1.7. NaV1.4 was consistently the fastest to activate and inactivate, followed in order by NaV1.3, NaV1.2, NaV1.1, NaV1.7, and finally NaV

MiTeC DirList is a compact application that was designed in order to help users easily list the contents of their folder structure. It will allow them to define specific search criteria and it will identify all the files that meet that criteria, in the user-selected locations. MiTeC DirList offers a minimalist interface that will present users with a good balance between user-friendliness and actual features. Its three-tab array will allow one to easily select the preferred directories, define a search criteria and then list its contents accordingly. Being lightweight on resources and with no installation process, the application will be quite responsive and efficient in use. Nevertheless, although its handling is straightforward and easy to understand, it would have been better for it to also include a basic

documentation for novice users. List the contents of your PC's directories with this utility that offers listing export in CSV and HTML file formats. Users will be able to browse their PCs' folder structure and select the preferred locations for content listing. The application will allow them to list the directories recursively and they will be able to customize the search criteria with their own text strings. Once all the folder content has been listed, users can proceed with formatting the resulted listing report and exporting it to either CSV or HTML formats. Nevertheless, it would have also been beneficial for the utility to offer exporting directly to text formats, therefore increasing the interoperability even more.

Lightweight application that will help users list the contents of their directories and save it for inventory purposes. Users who seek for an easy-to-use software solution that could allow them to list the content of their folders / directories, could make a wise choice when selecting this application. By using its clean interface and basic features they will be able to list their files in no time, with no additional hassle. More than that,

the application will even allow them to save the resulting listings to HTML or CSV formats, for external processing.

Q: Pushing the bower.json file in a repository with an origin remote I have a git repository that contains a project folder including (among others) a bower.json file. I would like to push that folder to a remote repository as a submodule.

```
bower.json file { "name": "project",  
"description": "Project description", "authors": [],  
"ignore": [], "dependencies": {}},
```
