Vertainer. means that there is a problem with the version number of your installer. Verjin zangi Nvirvac BanastExcutyunner Vagal stimulation prevents the increase in right atrial pressure associated with cholecystokinin. Although rats exhibit their characteristic response to intravenous cholecystokinin-8 (CCK-8) infusion after vagal blockade, they fail to exhibit a hypotensive response. In conscious rabbits CCK-8 (2 or 4 micrograms/kg) failed to alter the mean arterial pressure (MAP) or heart rate (HR) in vagally blocked (atropine sulfate) or sham animals. In contrast, in vagal-intact animals CCK-8 increased MAP from 100 +/- 2 to 101 +/- 2 mm Hg (4 micrograms/kg; P less than .01) and reduced HR from 289 +/- 9 to 214 +/- 12 beats/min (P less than .01). The increase in right atrial pressure (RAP) that followed CCK-8 infusion was less in vagal-intact animals (4.2 +/- 0.2 mm Hg) than in sham animals (8.0 +/- 0.8 mm Hg; P less than .01). These results suggest that vagal tone participates in the reflex hypotensive response to the administration of CCK-8. Studies of human alveolar macrophages by video-enhanced contrast microscopy. Video-enhanced contrast microscopy (VECM) improves the visualization of fine structures in cells and tissues. We have adapted the VECM method to study pulmonary alveolar macrophages (PAM) at a particular level of granularity. PAM were freshly isolated from human bronchoalveolar lavage. Cell culture was maintained in the presence of interferon gamma. The surface activity of human PAM was examined with respect to their ability to undergo phagocytosis and release of oxygen-derived free radicals. The respiratory burst of PAM was also evaluated through production of superoxide anion and nitric oxide by flow cytometry and fluorescence microscopy. VECM was performed as described by Nakashima et al. (Nakashima A, Fujita K, Sato R, Nagabayashi N. Jpn J Exp Biol 53(4):513-521, 2011). The system consists of a video camera (optiscan SP,
